

Technology2Enjoy, where Finance “Talks” IT!

Article

In the new world of Finance the modern CFO is moving more and more into the digital space. With all new trends & Requirements coming up, like Robotics, Blockchain, IFRS 15, 16 and 17 and many more, the CFO is actually starting to share the seat of the CIO.

This movement is causing a lot of confusion within an organization; Finance and IT. The “language” spoken by is not always the same, causing delayed projects, confused resources and overall inefficiencies within an organization.

In my Personal experience as CFO in an international listed company at the NYSE, I have been part of multiple global Finance projects; Implementation of Oracle R12 for accounting, COGNOS for reporting, HFM for Consolidation and TM1 for budgeting.

Technology Enjoy

With all of the system implementations it was crucial that there was a thorough understanding of the accounting principles USGAAP and DUTCH GAAP (my personal responsibility) and making sure that all regulatory & Tax accounting requirements where met.

I found that my personal background in IT gave me a big advantage in working with the IT departments responsible for the implementations. I was able to speak both the “language” of Finance and IT.

The professionals at Technology2Enjoy are specialized in working on the edge of both Finance and IT. They are able to “talk” both Finance and IT and also have excellent understanding of Business Processes and translating this into the needs of an organization. This is one of the unique values that we as Technology2Enjoy can offer to customers.
