

Digitization: will humans become an obsolete workforce?

Article

Technology2Enjoy (T2En) drives the implementation of SAP Cloud to further support the digitization of business processes.

- Eddy van der Laan, Digitization Manager -

The Fourth Industrial Revolution is happening right now. Futurists are predicting a new era in which people are sitting at home with a universal basic income. Finally technology is getting ready for enjoyable possibilities.

Not only companies are getting totally digitized and eventually robotized, also at all levels of society this is a reality. Taking the example of Uber and others who already have thousands autonomous vehicles on the road. Real change is going on and companies will have to jump on this train or will vanish.

Figure 1 The Digitized Company?

Or is it all just a new hype?

Jump on the train

Whether this is a hype or not, we see the ongoing trend within companies to further digitize their business and operations. Both in white color as in blue collar jobs and business processes.

At financial consolidation departments, reduction of staff with 80% is no exception by introduction of software, robots doing the actual consolidation, humans 'only' approve and check. Or at production sites reduction of 80% labor by further introducing digital processing and clever robots.

So change is going on. Competitors are getting more competitive by reducing TCO and production costs, thus lowering the prices.

We are helping our customers to jump on this train. By getting the basics in place to further digitize.

SAP is supporting this by further developing a truly SaaS solution: SAP Cloud. SAP Cloud we see as a starting point to further digitize with Big Data, BI, AI and Robotics (Figure2).

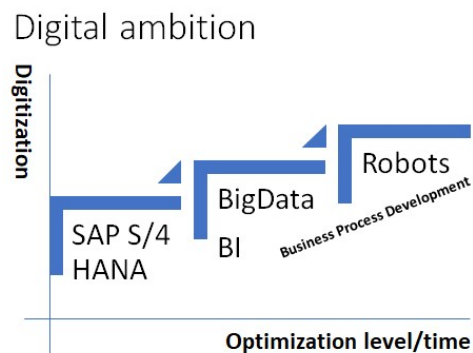

Figure 2 The Technology2Enjoy view

The digital journey begins with SAP Cloud

As SAP partner we are specializing in SAP Cloud, mainly because of the obvious advantages:

- Platform to digitize your company: basis for operational ERP transaction data + unstructured Big Data

Technology Enjoy

- Always up to date: IFRS, Privacy and latest technology;
- Better security: going to cloud makes your company again a bit more hack proof;
- Lower Total Cost of Ownership due to standardization of business processes and technology;

With a solid up to date ERP environment you pave the way to further digitize with Big data, AI and Robotics

SAP Cloud: S/4 HANA or SAP ByDesign

SAP Cloud has two main solutions:

1. SAP S/4 HANA Cloud with in dept processes for large organizations including finance, logistics, projects, reporting and is a platform to integrate further with Big Data solutions and specific processes like warehousing and healthcare.
2. SAP ByDesign is a complete ERP solution for smaller organizations in the public,

industrial and projects business.

Either way with SAP Cloud you get on the train.

How Technology2Enjoy can help

We have experience in digitizing companies and we want to be your partner in this journey through:

- Enterprise architecture
- Solution design
- Implementation & Rollout
- Training
- Saas provider

And no, we don't think humans will become an obsolete workforce in companies. We believe that through digitization new business opportunities will be at hand and your company can grow with you.
